

NETPMD

Design and Integration

Unbreakable Design and Integration from specialists that empower connectivity.

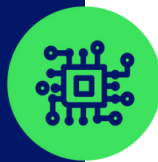

NetPMD Design and Integration excel as global fiber network specialists, linking homes and businesses for digital prosperity.

NetPMD provides quality, bespoke network design, and project management solutions within the telecommunications industry. With an end-to-end service complete with fiber network design, installation and integration, NetPMD is connecting communities and enabling smart cities to operate optimally in the modern world.

Revolutionizing fiber design services that empower everyone to thrive in the digital world.

NetPMD is committed to providing innovative and reliable FTTX solutions and stands ready to support Service Providers and construction companies worldwide, delivering next-generation, future-proofed solutions to homes and businesses around the world.

Network integration services

With a proven track record, NetPMD have worked across the USA, Europe and the Middle East.

Let our engineers go onsite in data centers, central offices, and within communities – proficiently handling the complexities that typically arise with fiber deployment. Taking all the onsite headaches away from you.

A range of capabilities

We know that managing the rollout of fiber across an entire city is complex and time-consuming. After all, we've done it multiple times.

It involves managing multiple tasks, delivered by several work package owners – while making sure cost, time, and quality objectives are being met.

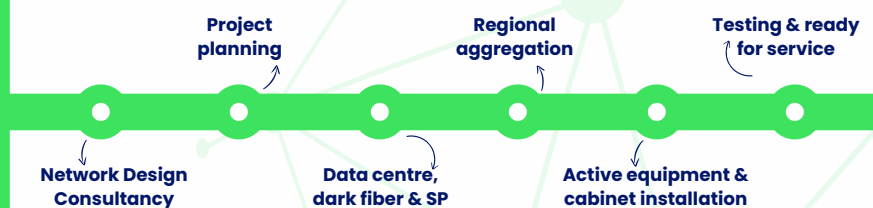

We believe managing stakeholders is the key to unlocking success and keeping your project on track. And, knowing the details, without losing sight of the strategic objectives.

Proficient technicians

Our team is made up of skilled fiber technicians and we're proud to mobilize your projects and represent your brand.

We have the perfect mix of highly qualified engineers who have extensive experience working for global communications giants. NetPMD works closely with leading network equipment manufacturers with our engineers trained to integrate this technology on their behalf.

Regardless of the nature or scope of your project, we can resource it, even at whole city level.

A comprehensive handover

With the size and scope of projects we work on – involving multiple stakeholders – we deliver comprehensive handovers to guarantee your fiber network will operate optimally.

Our dedication to your project doesn't waver towards the end. We offer you steadfast support from start to finish. After all, if your fiber network is a success, then that's a triumph for us too.
